TRAVEL AGENCY BOOKING MANAGEMENT

ConfirmRoute

Booking operations, made reviewable.

A workflow concept for turning travel confirmations into structured booking records that teams can inspect, correct, and approve.

DOCUMENT INTAKE | EXCEPTION REVIEW | HUMAN APPROVAL

PROJECT SUMMARY

From confirmation document to verified booking.

ConfirmRoute is a travel agency booking management MVP that brings document intake, booking records, exception handling, and approval into one clear workflow. A dashboard, searchable booking list, activity history, and audit CSV export help operators keep the work visible.

CORE CAPABILITIES

01

Document intake

Upload a supplier confirmation PDF or use repeatable sample scenarios to start a booking draft.

02

Local text extraction

PDF.js reads selectable text; deterministic rules identify common fields and show source evidence.

03

Exception-led review

Missing, changed, and duplicate values are flagged. Open exceptions block approval until resolved.

A HUMAN-LED WORKFLOW

01 **Capture**
Upload a PDF or choose a sample

02 **Extract**
Build a draft from document text

03 **Review**
Resolve flags and verify details

04 **Approve**
A person makes the final decision

TECHNOLOGY

Built with

App: Next.js 16.4, React 19, TypeScript

UI and validation: Tailwind CSS v4, Zod v4

PDF: PDF.js with local JavaScript parsing rules

Data: demo store or optional Supabase Auth and Postgres

Operations: audit CSV; optional Resend email alerts

PROJECT STATUS

Portfolio MVP

- Demo records are fictional.
- No AI or OCR: scanned PDFs need manual entry.
- Supabase foundations are implemented, but not live-project verified.
